Coffee Shop Stock Management — Version 1 Requirements

Delivery time: 7–10 working days

Platform: Mobile app for phones and tablets (Android & iOS)

Purpose: Simple stock control for coffee shops — fast for employees, clear for managers

1. What we are building

A multi-shop stock management app where:

- Each coffee shop has its own separate data (shops cannot see each other's stock or users).
- Employees can withdraw stock in a few quick steps.
- Shop admins manage products, stock, and staff for their own shop.
- A super admin manages all shops on the system.

2. User roles

Super Admin

- Manage all coffee shop accounts
- Create, activate, or suspend shops
- View and manage the overall system

Shop Admin (own shop only)

- Add and edit products and categories
- Choose a unit for each product (e.g. pcs, kg, g, L, bottles, boxes)
- Set minimum stock levels
- Add stock
- Withdraw stock
- Correct stock with stock adjustments
- Add and manage employees
- View stock history and reports
- Export basic PDF and Excel reports

Employee (own shop only)

- View products and available stock
- Withdraw stock (search → enter quantity → confirm)
- Cannot add stock

- Cannot create, edit, or delete products
- Cannot change minimum stock levels
- Cannot make stock adjustments
- Cannot edit stock history

3. Main features (Version 1)

Login

Secure login for all three roles. Users only see what their role allows.

Products & categories

Shop Admin creates and manages products and categories. Each product has a unit type, selected when the product is created:

- Pieces (pcs)
- Kilograms (kg)
- Grams (g)
- Liters (L)
- Bottles
- Boxes

Add stock

- Shop Admin adds stock to a product
- Stock quantity updates automatically
- The action is saved in stock history

Withdraw stock

- Employee or Shop Admin searches for a product, enters quantity, and confirms
- Designed to be as fast and simple as possible
- Stock updates automatically
- The action is saved in stock history

Stock adjustment

Shop Admin can manually correct stock when physical count does not match the system. Every adjustment is recorded in stock history with:

- Product
- Previous quantity
- New quantity
- Adjustment amount
- Admin name
- Date and time

Stock history (audit trail)

- Stock transactions are never permanently deleted
- If a mistake happens, it is fixed with a new stock adjustment — not by deleting or editing the old record
- Every transaction records: product, type (Add / Withdraw / Adjustment), quantity, user, date and time, stock before, stock after

Low stock alerts

Clear indicators when stock is low or out of stock (based on minimum levels set by Shop Admin).

Dashboard

- Simple overview of inventory
- Recent transactions

Reports

- Basic PDF export
- Basic Excel export

4. How daily use should feel

Who	Main job	How it should feel
Employee	Withdraw stock	Few steps, fast on phone/tablet
Shop Admin	Products, stock, staff, reports	Clear and complete for one shop
Super Admin	Shops and accounts	Control over the whole system

5. Not included in Version 1

These can be discussed for a later phase:

- Billing / payments / POS
- Supplier or purchase-order management
- Full offline mode
- Push notifications
- Custom roles beyond the three above
- Web dashboard (planned for a later phase)

6. Later phase (not in this delivery)

- Web dashboard for Super Admin and Shop Admin (desktop browser)
- Same features and data as the mobile app — no separate stock system

7. Delivery

Item	Detail
Timeline	7–10 working days
Deliverable	Working Version 1 mobile app (phones & tablets)
Shops	Multi-shop ready from day one (each shop's data stays separate)

8. Acceptance checklist (Version 1 is done when…)

☐ Login works for Super Admin, Shop Admin, and Employee

☐ Each shop only sees its own data

☐ Super Admin can create / activate / suspend shops

☐ Shop Admin can manage products, categories, units, and minimum stock

☐ Shop Admin can add stock, withdraw stock, and adjust stock

☐ Shop Admin can manage employees for their shop

☐ Employee can view stock and withdraw only

☐ Stock updates automatically after every transaction

☐ Stock history shows full details and cannot be deleted or silently edited

☐ Mistakes are fixed only via a new stock adjustment

☐ Low / out-of-stock indicators work

☐ Basic dashboard shows inventory and recent transactions

☐ Basic PDF and Excel export works

9. Confirmation

Please review this document and confirm:

1. The features above match what you need for Version 1
2. The items under "Not included" are OK to leave for later
3. The 7–10 day delivery window is agreed

Once confirmed, development can start on this scope.
